Business analyst (R&D)

Tasks

- Participate in the collection of the clients' needs by working closely with the PO and other BAs;
- Group the needs and identify trends and common functionalities that can be developed into a standard functionality;
- Find solutions to meet clients' requirements using new or existing products in collaboration with our architects and senior experts;
- Participate in workshops with architects, product experts and developers
- Actively participate in the design of conceptual data models (UML) and take ownership of ensuing logical data models (UML) and further specifications (BPMN, State and Sequence diagrams, Confluence, Jira, API design)
- Follow-up with developers and quality officers;
- Take part on the evolutions of the modules and their roadmap;
- Reactivity and adaptability will be part of your daily challenges as you will take part in workshops with POs, developers, and architects.

Education & Experience

- Bachelor or Master's degree, preferably in a computer science or technology field or a business degree with a strong focus on computer science, information technology, or a similar field
- Experience in the banking sector (back-office, order management, transaction execution, etc.)
- Experience working with API-first technology
- Experience working with technical architects is a plus

Technical expectations
